### III INTERNATIONAL MAXIBASKETBALL TOURNAMENT

“LA CARITA DE DIOS”  
QUITO – ECUADOR 2022  
LILACA FOUNDATION, INC.

“BETTER, TOGETHER”

**Quito**, officially San Francisco de Quito, is the Capital of the Republic of Ecuador, capital of Pichincha Province and the oldest in South America. It is the largest and most populous city in the country, with two million inhabitants in the urban area, and approximately 2.8 million inhabitants throughout the canton. In addition; it is the cantonal head of the Metropolitan District of Quito. It is located on the Guayllabamba valley, on the western slopes of the active Pichincha stratovolcano, in the eastern part of the Andes and its altitude is 2850 meters above sea level. The city is divided into 32 urban parishes, 6 of which are subdivided into neighborhoods. Quito is the political, cultural and financial center of the Republic of Ecuador, it houses the main governmental, administrative, cultural, financial, commercial agencies of the nation; the majority of transnational companies that work in Ecuador have their headquarters in the city.

**Quito** is located in several valleys whose irregular terrain has an altitude ranging from 1800 meters above sea level, in the flat places; as in the sector of Guayllabamba, going through heights of between 2200 masl; as in Cumbayá, 2550 meters above sea level; in Conocoto (Valley of the Chilllos), 2650 masl; in the El Condado sector (in the urban area of the city (in the main valley), 2820 meters above sea level in the Plaza Grande (historic center) and 3600 meters above sea level; in the highest neighborhoods, such as the Libertad neighborhood in the city center. Some foothills detached from the Andes mountain range, have formed in the main valley on which the city sits, a cloistered landscape, divided in its central part by the hill of El Panecillo (3035 masl). east along the hills of Puengasí, Guanguitagua and Itchimbía. As well as, the main mountain chain belonging to the Pichincha volcano, which is located in the Andes Mountains, encloses the city in the long valley; to the west with its three different elevations, Guagua Pichincha (4794 masl), Rucu Pichincha (4698 masl) and Condor Guachana, because of this the city has an elongated shape, whose width does not exceed 8 km, while the district occupies a valley of 12 000 km<sup>2</sup>. Elevation in the urban area in the main valley is 2650 meters above sea level in the El Condado area; while the highest is the top of La Libertad at 3400 meters above sea level. While the lowest point of the Metropolitan District is located in the Mashpi area less than 1000 meters above sea level.

**Weather** The city's climate corresponds to the subtropical highland climate, with many continental zed features ranging from arid and temperate climates to humid and cold; Quito is divided into 3 zones; south, center, and north; where the south is the coldest place in the city because it is the highest zone, the north is hot; where the highest temperatures always occur, and the center is mild. Quito's climate is divided into 2 seasons or stages; the winter with a prolonged period of rains with a high prevalence of atmospheric and climatic phenomena such as hail, temperatures tend to drop drastically until they are even at 0 ° C, even, every year there is at least one snowy phenomenon on the outskirts of the city in páramos located 4000 meters above sea level, the last one recorded in August 2019. The four-month dry season is the season where the highest temperatures occur. Because it is 2800 meters high and is located in a valley near the equator, Quito maintains spring conditions throughout the year. From June to September temperatures tend to be warmer, especially during the afternoon, while the rest of the year the temperature is usually mild with temperatures ranging from 10 ° C to 27 ° C. Due to its geographical position, the city of Quito receives extreme levels of solar radiation throughout the year, being one of the places on earth that receives it most, reaching up to 24 UVI (Ultra Violet Index)

Carlos Kiko Morlás  
President

William Pratt, Engineer  
Vice-President
